

Net zero statement

At t2 Group, we are committed to playing our part in combating climate change and achieving net zero emissions. We recognise the urgency of the global climate crisis and understand the vital role that businesses must play in addressing it. As an Apprentice training provider, we acknowledge our responsibility to minimise our environmental impact and transition to a sustainable, low-carbon future.

To achieve our net zero emissions goal, we are implementing a comprehensive strategy focused on reducing our carbon footprint across all aspects of our operations. This includes:

Energy Efficiency: We are investing in energy-efficient technologies and practices to minimise our energy consumption and reduce greenhouse gas emissions from our offices and operations.

Renewable Energy: We are increasing our use of renewable energy sources such as solar and wind power to power our operations, thereby reducing our reliance on fossil fuels.

Carbon Offsetting: Where emissions cannot be eliminated entirely, we are offsetting our remaining carbon footprint by investing in high-quality carbon offset projects that contribute to emissions reduction and sustainable development.

Transportation: We are promoting sustainable transportation options for our staff and Apprentices, such as cycling, public transport, and electric vehicles, to reduce emissions from commuting and travel.

Procurement: We are prioritising environmentally friendly and sustainable suppliers and products in our procurement processes, supporting the transition to a low-carbon economy.

Education and Awareness: We are educating our staff, Apprentices, and stakeholders about the importance of sustainability and providing training and resources to help them reduce their environmental impact both at work and in their personal lives.

Continuous Improvement: We are committed to regularly reviewing and improving our sustainability practices, setting ambitious targets, and monitoring our progress towards achieving net zero emissions.

By taking decisive action to reduce our carbon footprint and transition to a net zero future, we aim to not only mitigate the impacts of climate change but also inspire others in our industry to join us in this crucial endeavour. Together, we can create a more sustainable and resilient future for generations to come.
